

Q4 Tax-Loss Seasonality, 2018–2025

2,367 tickers · 8 fourth quarters, 2018 to 2025 · 15,046 stock-years · live read through the Oct 9, 2026 close

The read. On the 1Y sort alone, Q4 is a tie: losers and winners land at Sharpe 1.08 vs 1.10. The edge is in the 1M sort and the timing. September losers beat September winners in Q4 by +3.37% (t +3.7, positive 7 of 8 years). 1Y losers get sold Oct 1–15 (–1.31%, lagging 7 of 8 years), then lead into mid-December. January adds nothing. In the mega-caps the same pattern shows up, smaller and noisier (page 2).

Setup: long the 1Y-negative + 1M-negative basket (Sep 30 sort). **Entry** Oct 15. **Exit** Dec 15. **Invalidation:** basket minus the 1Y-positive + 1M-positive basket below –2.7% by Dec 15, the worst 2018–2025 print.

Findings

- **1Y sort: no Q4 edge.** Sharpe 1.08 vs 1.10; Q4 spread +1.54%, t +0.8.
- **1M sort: the clean Q4 edge.** September losers minus September winners +3.37% in Q4 (t +3.7, positive 7 of 8); Oct 15–Dec 31 +4.09% (t +3.9, positive 7 of 8, worst year –0.35%).
- **Double winners lag in Q4.** 1Y+1M positive Sharpe 0.80, beat SPY in 1 of 8 Q4s. Double losers 1.25.
- **Oct 1–15 is the flush.** 1Y losers minus winners –1.31% (t –3.0), 1Y+1M –1.88%, worst vs best quintile –2.80%. October is also the worst calendar month for the 1Y spread after SPY beta (–1.35%).
- **Mid-October to mid-December is the recovery.** 1Y+1M neg minus pos, Oct 15–Dec 15: +5.66% (t +2.6, positive 6 of 8, worst –2.67%, ex-2020 +4.35%). Basket alpha +16.3% annualized. Nov 1–15 (+2.81%) and Dec 1–15 (+1.94%, positive 7 of 8) carry it; Dec 16–31 is flat (–0.36% on the 1Y sort).
- **The relative low prints in November.** The loser-vs-winner path bottomed in November in 5 of 8 years (2020, 2022, 2023, 2024, 2025).
- **January is dead.** 1Y losers minus winners –0.17%, 1Y+1M –0.88%. Dec 15 re-sort to Jan 31: 1Y losers Sharpe 0.57 vs winners 0.81; best quintile 1.24 beats –30%-or-worse losers 0.84.
- **Mega-caps: same direction, not significant.** Among the 100 most-traded names, 1Y losers lag Oct 1–15 (–1.39%, 6 of 8 years) and carry Q4 alpha +2.3% vs –1.9% for winners, with t +0.4. The top 50 show no effect. Across the 20 largest names, a 1Y-negative Sep 30 led to Q4 excess vs SPY of +9.8% (beat 61%) vs +1.9% for 1Y-positive.
- **Year-end loser volume is rising.** Dec 21–31 loser volume over winner volume averaged +6.0% in 2018–2021 and +12.4% in 2022–2025, with no matching price drag in late December.

Mega-caps, 2018–2025

The main study equal-weights roughly 2,000 names, so AAPL counts the same as a \$2B stock. Here the same tests run only on the 100 (and 50) most-traded names, picked fresh at each Sep 30 by 63-day median dollar volume, so the list never uses hindsight.

Read: the Oct 1–15 flush shows up in the top 100 (–1.39%, losers lag 6 of 8 years). After that the loser edge is directional but not significant: Q4 Sharpe 0.89 vs 0.87, Oct 15–Dec 15 spread +2.61% (t +0.6). In the top 50 it disappears (Q4 –0.77%). The one mega-cap bucket that stands out is 1Y negative with a positive September: about 8 names, Oct 15–Dec 15 +11.1% vs SPY +4.7%, beat SPY 7 of 7 years.

Not yet

1Y losers vs winners QTD, against the 2018–2025 Oct 1–15 pattern

Method

Universe. The 2,367 tickers in the uploaded finviz list. Daily dividend- and split-adjusted closes and volume from Yahoo Finance via yfinance. Formation years 2018–2025 for the Q4 work; Q1 2018 through Q3 2026 for the other-quarter comparison; Jan 2018 through Sep 2026 for calendar months. 15,046 stock-years pass the Sep 30 screen.

Signals. Formed at the last trading day of September: 1Y = trailing 12-month total return, 1M = September return. Eligibility: a full 12 months of history and 63-day median dollar volume of at least \$1M. Buckets are equal-weighted at formation and held without rebalancing. Daily returns are clipped to -80% / $+150\%$ to remove bad ticks.

Statistics. Annualized return, vol, Sharpe and Sortino pool all daily returns inside the window across years. Sharpe and Sortino are over 13-week T-bills (1IRX). Alpha and beta are from daily returns vs SPY. t-stats use one observation per year (8 years). Calendar-month alphas regress the monthly spread on SPY with month dummies (HC1 errors).

Universe bias. The list is today's survivors, so delisted losers are missing, which lifts loser returns. Comparing windows and quarters on the same universe nets most of it out.

Reproduce. research/tax_loss_harvesting on branch claude/tax-loss-harvesting-analysis-enumq1 of kbw468/yfinance: study_since.py DATA OUT 2018, then make_pdf.py.
