

THE LIST, rate of change by sector, 2026-10-06 close

One-off. Sessions compared: now 2026-10-06, one session ago 2026-10-05, five sessions ago 2026-09-29; all under frozen model 39a5401a35848049, so every change is tape. mean P42 = average probability (%) across the sector's names that the next 42 sessions trace a top-quartile smooth climb. ΔP = change in that average in probability points (blue up, orange down). T1-2 = names at 40% or better; firing = names with at least one confirmed signature; Δsigs = net change in confirmed signatures firing across the sector; names up/down 5d = names whose probability moved more than half a point. Sorted by 5-session change.
